

ABSTRACT OF THE DISCLOSURE

1

2

3 A locking device includes a locking sleeve and a handle. The
4 locking sleeve defines a pin channel and a plurality of resilient
5 locking catches. The distal end of the sleeve includes a tip
6 having a cutting edge and a pin guide adapted to be located about
7 a portion of the diameter of a fixation pin. The locking sleeve
8 is used to stabilize the location and orientation of a fixation
9 pin implanted in a bone.
